

Credit Information...On Demand

What Is GetData?

GetData is an XML Web Service that provides software developers direct access to integrate the company credit information available from the creditsafe website. XML, stands for Extensible Markup language, and is a tool for transmitting information from one system to another. GetData, creditsafe's XML product, empowers developers to innovate and create dynamic, highly-effective websites and applications that incorporate current, accurate and easily understood credit information.

GetData returns the following information:

- Base information (name and address)
- Credit rating history
- Credit limit history
- Previous name history
- Change of status history
- County Court Judgement history
- Financials (profit & loss, balance sheet, capital reserves and key ratio data)

Application Integration

GetData is ready to integrate with the third-party applications that businesses rely on. Applications compatible with XML can request the latest credit information at the touch of a button.

Requirements

In order to use GetData creditsafe recommends you have:

- An understanding of XML
- Experience of programming with XML
- Working knowledge of a programming language or web development
- Working knowledge of the application to integrate with GetData
- An understanding of calling Web Service methods

Who Would Use GetData?

GetData is ideal for any business that would gain from receiving credit information on demand. A business that needs to make credit decisions quickly or a sales and marketing business that needs to identify potential sales prospects would greatly benefit from using GetData.

Why Use GetData?

1. Allows creditsafe credit information to be integrated with other systems
2. Provides an automated approach to retrieve creditsafe credit information
3. Provides the latest credit information from the creditsafe database on demand
